Sexual Interdependence Theory (SIT) is designed to fill a void in the treatment of sexual health. Theory or theoretical orientation is foundational to mental health treatment; theory conceptualizes human needs, motivation, and behavior and drives treatment selection. Despite the importance of theory, there has remained a lack of a comprehensive theory devoted to sexual development, dysfunction, and health. SIT synthesizes developmental theories that have withstood the test of time and applies this unified approach to human sexuality. The Sexual Progression Approach (SPA) is SIT's treatment companion. SPA is comprised of empirically-supported interventions developed specifically for each SIT stage. These interventions are designed to address the specific developmental barrier associated with each stage. The final goal, sexual integrity, is reached when the client not only has workable sexual values but also is able to live in harmony with them. This item ships from La Vergne, TN. Paperback.
