## Developing a Calculator for Evaluating Physical Design Characteristics and Whole House Performance: A Preliminary Method

By Michael O'Brien

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This Partnership for Advancing Technology in Housing report outlines the development of a whole house calculator that quantitatively assesses choices available in the processes, materials, components and systems of residential construction. The calculator is adapted, for residential construction, from the Environmental Evaluation System developed by Battelle Laboratories for systematically evaluating the impact of alternative projects. The calculator provides a means for calculating a whole house score. Each characteristic of a house and each design and construction process receive a performance score. These scores are then modified by values of the prospective homebuyer or builder and further modified by the way in which construction materials and processes interact with others to produce a whole house score. Two sample applications of the calculator are included with this report as MS Excel files.
