The most obvious and direct method of approaching such a correlation is by way of an objective test that will elicit similar reactions from the animal and the human being. The maze was suggested to me as the most convenient laboratory device for that purpose. Whatever may be the merits of the maze test, it at least affords a basis for a comparison of the activities of an inclusive range of animal types. The dearth of published accounts dealing with the normal human adult reactions in the maze led me to believe that the investigations should be initiated in that practically untried field. Such a series of tests promised, in the first place, a...
